**Buffered Return Optimization Securities linked to iShares MSCI Emerging Markets Index Fund**

**Description**

Royal Bank of Canada issued \$2.16 million of Buffered Return Optimization Securities linked to iShares MSCI Emerging Markets Index Fund on June 29, 2012 at \$10 per note.

These notes are Royal Bank of Canada-branded Buffered PLUS securities that do not pay periodic coupons, but instead pay a single amount at maturity depending on the final level of iShares MSCI Emerging Markets Index Fund.

If on June 24, 2014 iShares MSCI Emerging Markets Index Fund's share price is higher than \$37.41, but lower than \$47.19, the notes pay a return equal to the percentage increase in iShares MSCI Emerging Markets Index Fund, up to a cap of 26.13%. If on June 24, 2014 the refe is below \$37.41 but not below \$33.67, investors receive \$10 face value per note. If iShares MSCI Emerging Markets Index Fund's share price on June 24, 2014 is lower than \$33.67, investors receive face value per note reduced by the amount the reference asset is below \$33.67 as a percent of the initial level, \$37.41.

**Valuation**

This product can be valued as a combination of a note from Royal Bank of Canada, one short out-of-the-money put option, one long at-the-money call option, and one short out-of-the-money call option. For reasonable valuation inputs this note was worth \$9.21 when it was issued on June 29, 2012 because the value of the options investors gave Royal Bank of Canada plus the interest investors would have received on Royal Bank of Canada's straight debt was worth \$0.79 more than the options investors received from Royal Bank of Canada.

There is no active secondary market for most structured products. Structured products, including this note, therefore are much less liquid than simple stocks, bonds, notes and mutual funds. Investors are likely to receive less than the structured product's estimated market value if they try to sell the structured product prior to maturity. Our valuations do not incorporate this relative lack of liquidity and therefore should be considered an upper bound on the value of the structured product.

**Payoff Curve at Maturity**

The payoff diagram shows the final payoff of this note given iShares MSCI Emerging Markets Index Fund's share price (horizontal axis). For comparison, the dashed line shows the payoff if you invested in iShares MSCI Emerging Markets Index Fund directly.

| \$48.63                                  | \$12.61        |
| \$52.37                                  | \$12.61        |
| \$56.12                                  | \$12.61        |

**Maturity Payoff Diagram**

*The contingent payoffs of this Buffered Return Optimization Security.*

**Analysis**

This Buffered Return Optimization Security pays investors the increase in iShares MSCI Emerging Markets Index Fund capped at 26.13%, but if iShares MSCI Emerging Markets Index Fund declines over the term of the note, investors will suffer losses equal to the percentage decline in iShares MSCI Emerging Markets Index Fund. In addition, investors bear the credit risk of Royal Bank of Canada. Investors purchasing this Buffered Return Optimization Security effectively sell at-the-money put and out-of-the-money call options to Royal Bank of Canada, buy at-the-money call options, and a zero-coupon note from Royal Bank of Canada. This Buffered Return Optimization Security is fairly priced if and only if the market value of the options investors received from Royal Bank of Canada equals the market value of the options investors gave Royal Bank of Canada plus the interest investors would have received on Royal Bank of Canada's straight debt.

**Royal Bank of Canada's Stock Price**

*The graph above shows the adjusted closing price of the issuer Royal Bank of Canada for the past several years. The stock price of the issuer is an indication of the financial strength of Royal Bank of Canada. The adjusted price shown above incorporates any stock split, reverse stock split, etc.*

**Royal Bank of Canada's CDS Rate**

*Credit default swap (CDS) rates are the market price that investors require to bear credit risk of an issuer such as Royal Bank of Canada. CDS rates are usually given in basis points (bps). One basis point equals 0.01%. Higher CDS rates reflect higher perceived credit risk, higher required yields, and therefore lower market value of Royal Bank of Canada's debt, including outstanding Buffered Return Optimization Security. Fluctuations in Royal Bank of Canada's CDS rate impact the market value of the notes in the secondary market.*

**iShares MSCI Emerging Markets Index Fund's Share Price**

*The graph above shows the historical levels of iShares MSCI Emerging Markets Index Fund for the past several years. The final payoff of this note is determined by iShares MSCI Emerging Markets Index Fund's share price at maturity. Higher fluctuations in iShares MSCI Emerging Markets Index Fund's share price correspond to a greater uncertainty in the final payoff of this Buffered Return Optimization Security.*

**Realized Payoff**

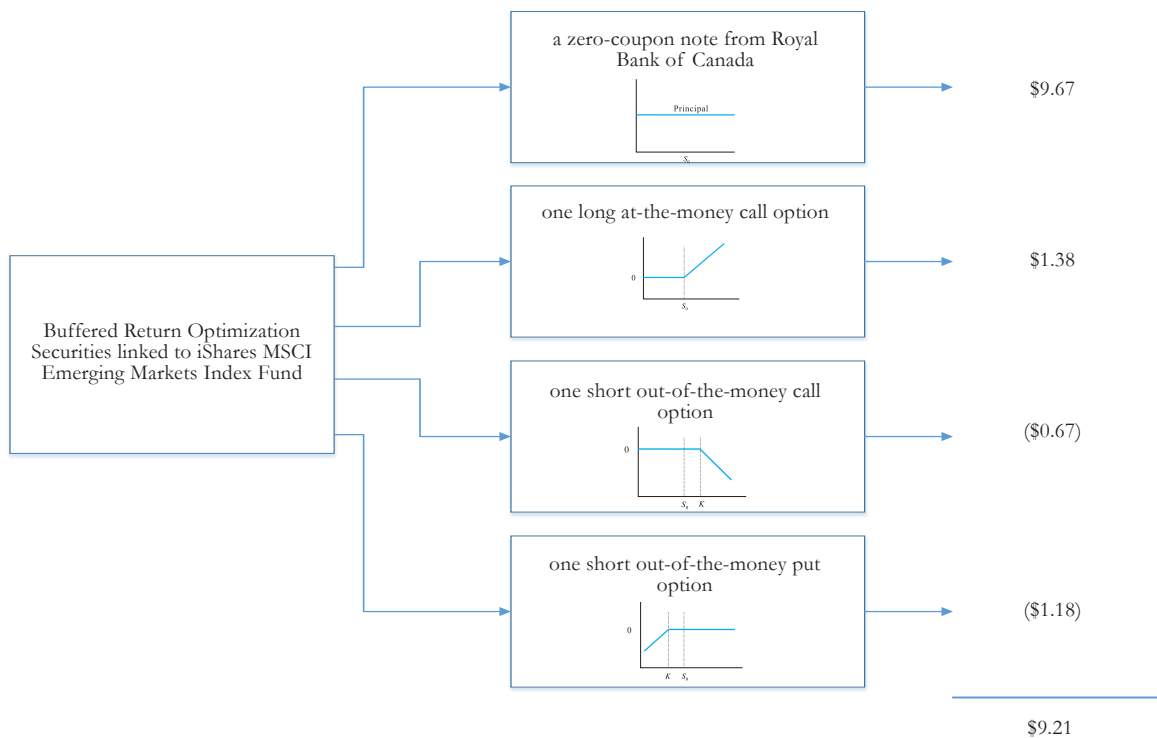

This product will mature on June 30, 2014.

## Reference Asset iShares MSCI Emerging Markets Index Fund's Implied Volatility

The annualized implied volatility of iShares MSCI Emerging Markets Index Fund on June 26, 2012 was 29.10%, meaning that options contracts on iShares MSCI Emerging Markets Index Fund were trading at prices that reflect an expected annual volatility of 29.10%. The higher the implied volatility, the larger the expected fluctuations of iShares MSCI Emerging Markets Index Fund's share price and of the Note's market value during the life of the Notes.

## Decomposition of this Buffered Return Optimization Security

This note can be decomposed into different components, and each component can be valued separately. The chart above shows the value of each component of this Buffered Return Optimization Security.

1. Delta measures the sensitivity of the price of the note to the iShares MSCI Emerging Markets Index Fund's share price on June 26, 2012.
2. CDS rates can be considered a measure of the probability that an issuer will default over a certain period of time and the likely loss given a default. The lower the CDS rate, the lower the default probability. CDS rate is given in basis points (1 basis point equals 0.01%), and is considered as a market premium, on top of the risk-free rate, that investors require to insure against a potential default.
3. Fair price evaluation is based on the Black-Scholes model of the iShares MSCI Emerging Markets Index Fund on June 26, 2012.
4. Calculated payout at maturity is only an approximation, and may differ from actual payouts at maturity.
5. Our evaluation does not include any transaction fees, broker commissions, or liquidity discounts on the notes.
